

What should I do if Retroactive can't be opened?

When you try to open Retroactive, macOS may prompt you "Retroactive cannot be opened because it is from an unidentified developer." This is normal and expected.

To open Retroactive, [right-click](#) on the Retroactive app in Finder, and click "Open".

What if Retroactive still doesn't open after right clicking?

Right-click on the Retroactive app again, then click "Open". Alternatively, navigate to System Preferences > Security & Privacy, and click "Open Anyway".

Why is my Mac blocking Retroactive from opening?

Don't worry – Retroactive will not harm your Mac. This alert only shows up because Retroactive is not notarized. Retroactive is open source, so you can always [examine its source code to make sure it's safe](#).
